Your SSAT Score Report - Interpreting Your Score Report

Scoring an SSAT begins by adding up all of a student's correct answers. In order to minimize the effects of random guessing, the SSAT deducts 1/4 point for each wrong answer. Questions left blank are not counted. This method of scoring does mean that students must pay attention to when it is advantageous to guess and when they are better off leaving questions blank. Wrong answers are marked in green; blank answers are marked in blue.

The raw score is the total number of correct answers, minus the total penalty for incorrect answers. Your actual SSAT report will also include a scaled score, which is used to provide a consistent measurement of student skills across different test forms.

The best way to gauge performance on the SSAT is to compare a student's performance to that of other students. Percentile ranks are an effective way to make these comparisons. Your actual SSAT report will provide a comparison by grade and gender to students who have taken the SSAT in the last 3 years. Unfortunately, the SSAT Board has only provided an approximation of percentile ranks for the released practice tests. These estimated percentile ranks do not account for grade or gender.

From a tutoring perspective, the most important thing we look at is what questions a student got right or wrong and why. Scores give points, whereas a tutor needs a picture. The main purpose of practice tests is for the tutor to see a student's testing skills under exam conditions and then be able to review and improve those skills. Whether a student is taking the initial practice test or a follow-up exam, the same fundamental principles apply.
